## End-user testing and feedback

**Name of tester:** Mario Proaño

After having delivered the finished code to the user, we did an interview with him, to know his opinion and things to improve, and this is what he told us:

The program works perfectly, meets the requirements I requested, does the corresponding math operations and saves the data well. It's easy to use and friendly for a person who does not know how to use technology.

I also like that it is secure, because if the correct password is not entered, the program cannot be used, and that is very important in my company.

As sections to improve, I would recommend that the interface be more animated or have more color so that it is much more beautiful and fun to use.

I would also recommend that in the part of completing the worker's gender, it be an interface in which an option that comes by default is indicated, to save time and make the work more efficient

The screenshot shows a 'Register' form window with a title bar and standard OS window controls. The form contains four input fields: 'Name:', 'Id:', 'Gender:', and 'Age:'. A blue arrow points to the 'Gender:' input field with the text 'make this box a pointing box and not a filler box'. Below the form are six buttons: 'Add', 'Remove', 'List Contacts', 'Upload', 'PayRole', and 'Exit'. At the bottom is a table with two rows of data.

Name	Name	Id	Id	Gender	Gender	Age	Age
61df53002...	camila	4	femenine	12			
61df54673...	Mateo Mald...	3	Masculim	43			

At the time of displaying the data (List Contacts), the program tabulates them wrong, although I can understand I think they should fix that error.

Register

Name:

Id:

Gender:

Age:

Fix the tabulation of list contacts

Add

Remove

List Contacts

Upload

PayRole

Exit

Name	Name	Id	Id	Gender	Gender	Age	Age
61df53002...	camila	4	femenine	12			
61df54673...	Mateo Mald...	3	Masculim	43			

I would also like that in the part of Payment Role, it is specified in a better way which are the sections that need to be completed and which are not.

Monthly payment

Hours worked

Hourly pay

Basic salary

Bonus

Gross salary

Discount

Net salary

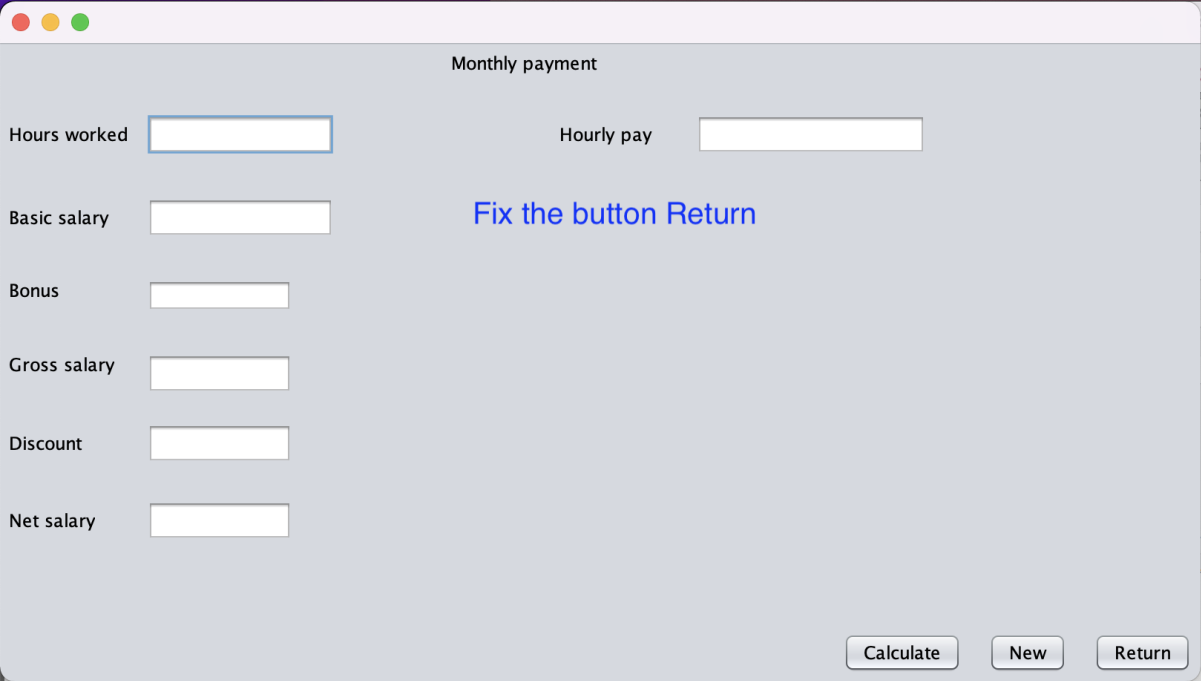

Better specify which sections to complete and which do not

Calculate

New

Return

In this same section at the time of click return, the program breaks. You should fix that although it is not a very serious bug

The screenshot shows a window titled "Monthly payment" with a light gray background. On the left side, there are six labels with corresponding input fields: "Hours worked", "Basic salary", "Bonus", "Gross salary", "Discount", and "Net salary". The "Hours worked" field is currently selected with a blue border. On the right side, there is a label "Hourly pay" with an input field. In the center of the window, the text "Fix the button Return" is displayed in blue. At the bottom right, there are three buttons: "Calculate", "New", and "Return".

Those are my recommendations, to improve your code and work even better than it already works now.
